EDUCATION

Georgia Institute of Technology

Bachelor of Science in Computer Science

Atlanta, GA

Aug. 2023 – May 2027

Relevant Coursework : Data Structures & Algorithms, Linear Algebra, Probability, Discrete Math, Machine Learning

EXPERIENCE

IT Backend Developer

Jan. 2025 – Present

Georgia Institute of Technology | Part-time

Atlanta, GA

- Improved backend support efficiency by automating account provisioning, system access, and device setup workflows across Windows, macOS, and Linux environments with Python scripts, supporting 50+ users weekly.
- Reduced manual troubleshooting time by 30% by building scripting-based solutions for recurring operational tasks and using Vim to quickly modify system files, configurations, and backend support tools.
- Increased deployment consistency by standardizing workstation configurations and validating network-connected systems, contributing to 100+ successful device setups weekly.

PROJECTS

YouTubeTrades | Next.js, React, TypeScript, Tailwind CSS, YouTube API, Finnhub

June 2026

- Built a stock-hype dashboard that analyzes recent finance YouTube videos, descriptions, view counts, and spoken transcripts to identify and rank mentioned stocks by aggregate audience exposure.
- Integrated Finnhub live market data and implemented channel management, price and trend filters, hype and price-movement sorting, bounded concurrency, and multi-layer caching to improve performance and stay within API rate limits.

Brain Tumor Neural Network Classifier | Python, PyTorch, torchvision, ResNet18

June 2026

- Developed an end-to-end, multi-class brain MRI classification pipeline using PyTorch and transfer learning with a pretrained ResNet18 model to distinguish glioma, meningioma, pituitary tumor, and no-tumor scans across approximately 7,000 labeled images.
- Engineered training and validation workflows with 224×224 image resizing, ImageNet normalization, data augmentation, CrossEntropyLoss, the Adam optimizer, an 85/15 data split, and best-model checkpointing.
- Built modular configuration, training, evaluation, and inference scripts that automatically detect CUDA, generate loss and accuracy curves with Matplotlib, and report per-class confidence for individual MRI predictions.

Noted | Next.js, React, TypeScript, Supabase, OpenAI, Playwright

2026

- Built an AI-powered student calendar that imports courses, assignments, and deadlines from Canvas and generates personalized study schedules around workload, deadlines, and user preferences.
- Developed natural-language scheduling, image and voice input, Google Calendar sync, and secure Supabase-backed authentication with Row-Level Security, validation, and rate limiting.

LEADERSHIP, CLUB, & VOLUNTEER WORK

Coding Instructor

Jan 2026 – Present

Black Student Computing Organization @ Georgia Tech

Atlanta, GA

- Taught 20+ students at ABC Learning Academy introductory programming concepts using Scratch, helping them build their first interactive games and animations.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, C#, Go, Rust, Kotlin, SQL, Bash/Shell, R, Swift, Ruby, PHP, Scala, HTML/CSS, Assembly

Frameworks/Libraries: React.js, Next.js, Node.js, Express.js, Django, Spring Boot, NumPy, JAX, Pandas, OpenCV, PyTorch, TensorFlow

Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase

Tools/Platforms: Git, GitHub, Docker, AWS, REST APIs, Vim, Playwright, OpenGL, Unity, Unreal Engine, Jira, Power BI
